

## IT specialist for application development or system integration (m/f/d)

As an IT specialist in application development, you create and program customer-specific software applications. They create individual software from scratch or test existing applications, adapt them, and develop application-oriented user interfaces. For their work, they use programming languages and tools such as developer tools. They also take on tasks in project planning and control. In addition, they troubleshoot with the help of expert and diagnostic systems and advise or train users.

### Your tasks:

- Develop software solutions for technical, mathematical-scientific and commercial application areas, including multimedia applications, expert systems or networked production facilities
- Lead projects to develop customer-specific application solutions in commercial, technical, and organizational terms, including quality assurance
- Monitor the market for IT technologies and systems, hardware and software products

### Your skills:

- School-leaving qualification: at least secondary technical school leaving certificate
- Strong enthusiasm for IT
- Technical and commercial understanding
- Independent work / initiative
- Reliability & Ability to work in a team
- Motivation / willingness to perform and learn
- Communication skills
