

Electronics technician for automation technology (m/f/d)

As an electronics technician for automation technology, you ensure that our automated production systems run. You'll be involved in setting up new plants, planning the power supply, integrating the plants into our IT world, and linking them with industrial robots and Industry 4.0 components. Later, you will optimize processes with your creativity through programming adjustments. Your training starts with a comprehensive basic qualification in our own training center. Here you will learn everything you need to know about electrical engineering, electronics, and the programming of control systems.

Your tasks:

- Set up automation technology systems, install components
- Testing and commissioning automation systems
- Monitor, service and maintain automation systems
- Document work and work on optimizing processes

Your skills:

- Technical understanding
- Independent work / initiative
- Reliability
- Communication skills
- Ability to work in a team
- Motivation / Willingness to perform and learn
