

Mechatronics technician (m/f/d)

As a mechatronics technician, you will be a part of the maintenance staff that is equally well versed in mechanics and electrical engineering. Your training includes topics from electrical engineering, mechanics, and computer science. After an extensive basic training in our training center, the in-depth qualification takes place in the operating departments, on high-tech machines and equipment. You will commission, maintain and service equipment, machines, and systems, test the systems and connections made for functionality and carry out quality control.

Your tasks:

- Plan and prepare work tasks, read technical documents (e.g. production, assembly, circuit, installation, function and maintenance plans, operating and instruction manuals).
- Manufacture components, install or convert mechatronic systems
- Testing and commissioning mechatronic systems
- Maintain, service and repair systems
- Participate in the optimization of automated procedures and processes

Your skills:

- Technical understanding
- Independent work / initiative
- Reliability
- Communication skills
- Ability to work in a team
- Motivation / Willingness to perform and learn
