

IT specialist (m/f/d)

If you are interested in technology and enjoy tinkering with PCs, then training as an IT specialist is the right thing for you. You will not only learn how to identify vulnerabilities, but also what measures you can take to eliminate them yourself. You will encounter topics such as IT security and data protection, but organizational aspects are also part of the training. During the apprenticeship, you will get to know the following four specializations: System integration, application development, digital networking and data and process analysis.

Your tasks:

- Installation of individual hardware components and parts in the computer
- Creation, implementation and maintenance of software, as well as documentation of the development process
- Optimizing system performance and providing support for technical questions and problems (IT support)
- Acquisition and analysis of data, as well as final optimization of business processes

Your skills:

- School-leaving qualification: at least secondary technical school leaving certificate
- Strong enthusiasm for IT
- Technical and commercial understanding
- Independent work / initiative
- Reliability & Ability to work in a team
- Motivation / willingness to perform and learn
- Communication skills
